2016
Population & Housing Census

Summary Report

St Helena Statistics Office
A Publication from the St Helena Statistics Office

This report outlines the high-level results from the 2016 Population and Housing Census of St Helena.

Statistical outputs are produced to high professional standards as outlined in the UN Code of Practice for Official Statistics. The Census has been conducted inline with UN Principals and Recommendations. This report is free from political influence.

This report and supplementary materials are available electronically from: www.sainthelena.gov.sh/statistics

To the People of St Helena

As supervisor for the 2016 Population and Housing Census it has been my privilege to oversee and co-ordinate one of the largest statistical exercises we can contemplate on St Helena. Every household and person on St Helena has been touched by the Census; essential information has been gathered which will be used to the benefit of the Island for years to come.

A Census provides us with an accurate and complete view of the Island, the people who live here and the way that they live. The results are beyond value for policy formation, planning of services and will be used to inform decision making (both on Island and overseas) to benefit the people of St Helena for years to come. The 2016 Census has been a particularly important exercise as it is the baseline which will allow us to accurately monitor the social impacts of the forthcoming air service.

The Island population has grown with the enumerated resident population on Census night, Sunday 7 February 2016, standing at 4,534. This is an increase of 457 persons (11.2%) from 4,077 enumerated in the 2008 Census. Vital information regarding the demographics of the population has been gathered, highlighting an aging population and a continuation of the trends for young adults to leave the Island. Both of these present a considerable challenge to the future of St Helena and will be carefully monitored.

A Census is a vast and complex exercise which has relied on the hard-work and determination of a close knit team to make sure that the right Census for St Helena was developed and delivered within an extremely short time-scale, and on a very limited budget. The team have been helped by many people within the community who have participated in consultation and piloting exercises, provided advice and insight during fieldwork exercises and have been supportive in many other ways to assist the team in their work. Thanks is also due to the people of St Helena who willingly participated in the Census and completed their questionnaires quickly and accurately- your individual details will be protected and as a whole the information you have provided is beyond value in protecting the interests of the Island and supporting sustainable development.

Overview
This report outlines some of the high level results from the Census. There is much more that can, and will, be done to explore the detail within the data which has been collected. There is an extremely high demand for results from the Census and so the decision has been made to publish data and analysis as they become available. There will be many more results to follow and the Statistics team welcome input and requests from users on outputs which will be of use to the community of St Helena. Eventually all Census data will be made available for the general public to use. This will take some time as we have to be sure that no identifying details regarding individual households or people are contained in the data.

The 2016 Census process has seen a number of developments to meet user needs. A few of them are described here; future reports will give more detail.

Legal Basis
The requirements for undertaking a Population Census on St Helena are outlined in the Census Ordinance (1986). The 2016 Population and Housing Census was undertaken according to these specifications and the Attorney General consulted throughout the process to ensure correct interpretation of requirements and that processes strictly adhered to these.

In addition to the Census Ordinance, the Statistics Ordinance (2000) and UN Code of Practice for Official Statistics were relied upon to provide further guidance on the development of Census materials, processing and dissemination of results.

Online Census
For the first time on St Helena an option to complete the Census online was offered. Those who chose to take up this option gave extremely positive feedback regarding all aspects of the user experience. As a new development it is perhaps understandable that the number of people taking up this option was small (7.5% of respondents, 12.9% of households with internet access). Incentives for online completion were given in the form of:

- A 10Mb allowance to cover the ‘cost’ of completing online
- The option to use a dedicated computer in the Statistics Office
- Permission from the Chief Secretary for all members of St Helena Government to complete the Census online during working hours.

None of these were sufficient incentive for the majority of people to overcome reticence towards use of the online platform- an interesting conflict with campaigns to improve use of the internet on St Helena and implement digital solutions for public administration. The online platform will be used again for future Census’ but further investigation is definitely needed to understand barriers to uptake of online solutions.

**Questionnaire Development**

An extensive consultation was held - initially targeted towards Elected Members, government administration, key figures within the community, Private Sector bodies and non-Government organisations. This was then extended to cover all members of the public, including through public meetings, media publicity and public invitations to participate which were displayed in prominent locations across the Island. Feedback from the consultation was used along with UN recommendations to develop a questionnaire of internationally harmonised standards but targeted towards local information needs.

The consultation led to an initial draft of the materials to be used in the 2016 Census. This was followed by a thorough piloting process which allowed trialling and further development of the questionnaire to ensure it was accessible, appropriately worded and yielded intended answers. The piloting and feedback was open to all members of the public in addition to a number of individuals and household types who were targeted for invitation to participate- ensuring a broad range of user types and needs were considered.

The final suite of Census materials consisted of:

<table>
<thead>
<tr>
<th>Form</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Form A</td>
<td>The main Census questionnaire- delivered to all households. Contained three schedules: Schedule 1: Household Information Schedule 2: Person Information (residents) Schedule 3: Visitor Information The online version of the household questionnaire contained the same questions and schedules but with the structure slightly modified to suit online delivery.</td>
</tr>
<tr>
<td>Form B</td>
<td>An optional survey to allow St Helenians overseas on Census night to participate. Also available for online completion.</td>
</tr>
<tr>
<td>Form C</td>
<td>For enumeration of communal establishments. Required key information relating to the nature of the establishment and the residents as of Census night. Residents of communal establishments were given the option to provide full person level information through completion of form E1.</td>
</tr>
<tr>
<td>Form D</td>
<td>For enumeration of empty dwellings.</td>
</tr>
<tr>
<td>Form E1</td>
<td>Person level questions as per Schedule 2 of Form A. To be used for both: i) An extension form for dwellings with more than five usual residents ii) Residents of communal establishments wishing to provide full person level information.</td>
</tr>
<tr>
<td>Form E2</td>
<td>A visitor extension form for dwellings with more than five visitors on Census night <em>(was not required by any households)</em></td>
</tr>
</tbody>
</table>

**Guidance Notes**

To provide full, detailed instructions on completion of the Census form, the meaning of questions and instructions on how to answer depending on individual circumstances.

Census Support
It was expected that a number of people would require support to complete the Census questionnaire. Some of the measures taken to provide this were:

- Guidance notes with detailed instructions on completion of the questionnaire
- Training of Census enumerators to provide one-to-one support to persons needing it
- Community support officers were also recruited and trained to provide an additional avenue for support
- A number of radio phone-in sessions were held to discuss completion of the Census questionnaire and provide an opportunity for members of the public to ring in and ask any questions they had
- A dedicated Census hotline, open extended hours including weekends, to allow users to access support
- Community support sessions held in a number of locations across the Island for respondents to attend and receive one-to-one support
- Targeted support for persons requiring it, primarily those anticipated to require exceptional support in order to fully participate in the Census
- Involvement of the Police, Social Workers and Psychiatric Nursing team to advise on appropriate action to enumerate vulnerable or potentially unpredictable individuals

These measures were largely successful in mitigating the risk of noncompliance. Uptake of community support options was disappointingly low which placed an additional burden on Census enumerators. Further consultation will be held on support requirements for future Census exercises, specifically to determine if the forum for community support needs changing or if resources are better diverted towards strengthening of the enumerator team.

Census Delivery
The principal operational period for the 2016 Census was from Saturday 30 January to Sunday 14 February, with Census night itself being Sunday 7 February. This made for an extremely intense fieldwork period for Census enumerators who were required to deliver Census materials to all households within the first week and then arrange for collection, or return, during the second week, post-Census. The purpose of this short time-span was to keep the Census very much at the forefront of respondents minds and prevent loss/ misplacing of Census materials. Feedback strongly supports an extended operational period in the future, which will also allow a smaller, but stronger group of enumerators, to take on the bulk of the Census enumeration work.

The administrative districts were broken down into a total of 24 enumeration areas- each with a designated enumerator. Basil Read took responsibility for enumeration of their entire workforce, reducing enumerator burden and overcoming potential language barriers. The Geographic Information Services (GIS) team provided detailed maps of each enumeration area showing key features and the ‘footprints’ of each building within that area. Each footprint was allocated a unique identifier. Census enumerators used these maps to
identify dwelling locations and deliver Census materials. Where possible the unique identifier was used as the form identifier in anticipation of being able to produce geo-referenced Census information in the future. Clear instructions were given that if a dwelling was not marked the enumerator was to deliver Census materials and flag the omission to the Census supervisors.

Figure 1: Map showing the administrative districts of St Helena, supplied by Geographic Information Services (GIS) team and South Atlantic Environmental Research Institute (SAERI).

**Post Census Enumeration**
Upon completion of the initial enumeration fieldwork principal details relating to the households and individuals participating in the Census were collated. This allowed for identification of non-responders and for appropriate follow up to be made. This was completed by 31 March 2016.

Thorough checks of Census returns and anonymised data entry were completed in parallel. Discrepancies and omissions in completed Census details were queried with respondents to ensure accurate capture of key details. Checks were completed on 12 May 2016 with full data entry being completed on 19 May 2016. The efficient and accurate completion of this process is a credit to the core Census team and supports a high-level of assurance in Census Data.

**Batch editing, imputation and derived variables**
On completion of data entry further quality assurance was conducted on the collated Census data. Any outstanding anomalies in the data were identified and appropriate action taken to resolve. The results outlined in this report
refer to this initial data. Imputation of secondary fields and production of derived variables is ongoing and will be included in future reports.

Initial data entry was completed in a CSPro Database with results exported to Excel for ease of handling and analysis.

Key variables for which information was required from all respondents were:

**Household:** Tenure, number of usual residents present on Census night, number of bedrooms, kitchen, bathroom and toilet facilities, sewer system, water supply, access to hot water, main power for lighting, primary cooking fuel

**Person:** gender, date of birth, marital status, place of birth, immigration status and economic activity last week.

In cases where this key information was not initially provided follow up calls were made to obtain omitted answers. Where possible auxiliary statistical sources were also used to verify/complete missing fields.

It is intended that any further missing answers will be statistically imputed to provide a ‘complete’ final dataset. This stage of processing has not yet been completed and users will find that this summary report contains tabulations including the category ‘Not Stated’.

**Next Steps and Further Analysis**

There is much more that can, and will, be done to further explore the 2016 Census data. Short, topic specific reports will be published as the analysis becomes available. Relevant information will also be made available in electronic format (spreadsheet) to allow users to further explore the data and perform analysis to suit their individual needs. Updates will be publicised through local media. Interested users are encouraged to visit the statistics page on the SHG website ([www.sainthelena.gov.sh/statistics](http://www.sainthelena.gov.sh/statistics)) to check for further updates.

In case of queries or questions for specific updates users can contact any member of the Statistics Office team who will be happy to assist in any way they can.

Age of the St Helenian Household Population

In 2016 the median age on St Helena stands at 47.1, up from 44 in 2008 and 33 in 1998. The overall age dependency ratio (the ratio of those above/ below working age to those of working age) stands at 56 with the aged dependency ratio (population above age of retirement to those of working age) standing at 35, up from 26 in 2008, placing St Helena amongst the very highest of aged dependency in the world.

Age Dependency Ratio for the St Helenian Resident Population (1987 to 2016)

<table>
<thead>
<tr>
<th>Census Year</th>

</tbody>
</table>

The average age, and age dependency varies between administrative districts, the ‘youngest’ household population being Half Tree Hollow and the oldest in Blue Hill and Sandy Bay. The highest aged dependency is found in Jamestown and the lowest in Half Tree Hollow.

*No tick-box option to be ‘Unemployed and NOT looking for work’, may have led to an inflation of this figure. 10 registered unemployed at the time of the Census.

Unemployment on St Helena

In the first week of February 2016, the week prior to the Census, 76 St Helenians stated they were ‘Unemployed and looking for work’. There is a substantial discrepancy with official estimates of unemployment, which are monitored on a monthly basis. In February 2016 10 people were registered as unemployed and in receipt of unemployment allowance- the most frequently updated measure of unemployed on St Helena and so the official measure of unemployment on St Helena. The careers centre, run by Enterprise St Helena (ESH), was visited by two people in both the month preceding and the month following the Census.

The unemployment figures discussed here relate to people that have stated that they are economically active- at the time of the Census they were seeking, and available to start, paid employment.

It is clear that there is a need to further explore unemployment, particularly longevity of unemployment and barriers to recruitment. It is noted that in January 2016 29 posts were advertised in local media, two posts being re-advertised having failed to recruit previously. In February a further 31 local posts were advertised, one being re-advertised having failed to recruit previously.

Household Assets

The Households Assets figures refer to the holding, or not, of material goods by a household. The number or quantity of each asset held by a household was not asked for, just whether the household owned, rented or had main use of any of the listed assets.

Provisional Count of Empty Dwellings
In addition to the count of occupied dwellings, the 2016 Census operations included the identification and recording of unoccupied dwellings. These were identified by:

- Asking respondents to the household Census if they were responsible for any dwellings which were not occupied on Census night, and if so requiring them to complete Form D- questionnaire for empty dwellings.
- Requiring Census enumerators to take note of any empty dwellings within their enumeration area and, if unable to contact the person responsible for the property, complete an empty dwelling questionnaire to the best of their knowledge.

The information was to be completed for dwellings which were empty on Census night - regardless if it was temporarily empty or had been empty for an extended period of time. Initial quality assurance has been completed to remove any duplicate responses. Further investigation is required to verify that all unoccupied dwelling structures were identified - particularly those in a derelict/ ruined state situated away from inhabited dwelling areas.

In total 579 dwellings were identified which were empty on Census night. Of these 284 were habitable - being of a good state of repair with all basic amenities and suitable for immediate occupation. Of the habitable empty dwellings, 154 had been lived in within the last year.

This summary report is the official overview of the 2016 Population and Housing Census of St Helena Island. Information from the Census informs development of public policy and planning of service provision in both the public and private sector. The results from the census will form the basis for key decisions and strategic planning throughout a critical period of the Island’s development.

The report outlines the key aspects of the Census operations, including the consultation and planning stages, field activities and data capture. It is aimed at all users of Census data and it is hoped that everyone from policy makers, government administration, key figures in the private sector and the wider public will find it useful and informative.
